

1.Home.html:

This is the Home Page of the Project, you have 2 options here,

- 1) Cube world with Texture
- 2) Chess board Texture

Click on any one of them to see what they will do.

Cube world with: This work has the cube world from the previous assignments with two different texture on it. I used my pictures to add texture on the cubes, which I felt would be unique to do so. You can still use the mouse movements to see the interaction of the cubes to the mouse controls.

Chess board Texture: This is the work which has everything as chess texture. Everything includes the plane which is like the road map of the scene and the two box objects. As I am a chess player I just felt like keeping the chess texture for all the objects and make a small scene. I feel this will help in the future when I want to create different textures for different elements in the scene.
